

PHOTOSYNTHESIS_STUDY_GUIDE

Curated by ALEX for Sir | October 04, 2026

Photosynthesis Overview

- Process used by plants and other organisms to convert light energy into chemical energy.
- Light reactions create ATP and NADPH while dark reactions fix CO₂.

5 High-Yield Flashcards

- Front: What pigment absorbs light? / Back: Chlorophyll.
- Front: Where does the Calvin cycle occur? / Back: Stroma of chloroplasts.

Key Definitions

- Photosynthesis: Synthesis of chemical compounds with the aid of radiant energy.
